🎨 LESSON: Midjourney Prompts for 2D Animation Styles

Welcome to one of the most **powerful lessons** in this course — creating **consistent, cinematic 2D animation frames** using **Midjourney**.

These prompts are designed for **Niji 6** and **Version 7**, the best models for stylized animation and storytelling visuals.
You can use them to generate **scenes**, **characters**, or **transitions** for your storytelling videos.

⚙️ HOW TO USE THESE PROMPTS

1️⃣ Copy the prompt below.
2️⃣ Replace the **character/action/setting** with your story context.
3️⃣ Keep the **style descriptors**, **model version**, and **aspect ratio (--ar 16:9)** exactly as they are for best results.
4️⃣ Optional: Add **"–style raw"** or **"–chaos 20"** to experiment with more creative outputs.

💡 BONUS TIP

👉 Always **reuse the same style phrase** (ex: "angular minimalist animation style") for every scene in a story to maintain consistency.
This ensures all your frames look like part of the **same 2D animation universe**.

✅ **Action Step:**
Pick **one style** that matches your story and generate **3–5 key scenes** in Midjourney.
Use these to build your short animation flow in **CapCut or Runway**.
