

Nano Banana Pro: Intro

Why This Model Matters Google recently dropped what might be the biggest AI release of the year: Nano Banana Pro in Gemini. This model has dominated every benchmark and fundamentally changed what's possible with image generation. Two Core Capabilities

1. Perfect Character Consistency

You can maintain exact character consistency using just one reference photo. What this means: Take a single image of your company spokesperson, yourself, or any person. The model will generate that same person in completely different scenarios while keeping their appearance consistent. Use cases:

Brand Ambassadors

Create multiple shots of brand ambassadors

Character Content

Generate varied content with the same character

Campaign Building

Build entire campaigns around one person without multiple photo shoots

Product Image Multiplication

Works the same way with products. Upload one simple product photo. Use prompts with Nano Banana Pro to generate dozens of different product shots for ads and creatives.

Multi Character Capability

The model can handle up to 14 different reference characters in a single image while maintaining consistency across all of them. In the demo examples, they combined 14 different reference characters into one cohesive image. Every character maintained their distinct features.

> **Why this matters for advertising:** You can create creative shots that would be impossible or extremely expensive to produce in real life. Perfect for ad campaigns and business marketing where you need variety without the production costs.

Where to Access Nano Banana Pro

Google offers this model across multiple platforms. Here are your options:

Official Google Platforms

Google Vids

Integrated directly into Google's video platform

Flow

Available through Google's Flow interface

Gemini

Accessible through the main Gemini platform

External API Platforms

Kie AI (Recommended)

- Supports multiple image models
- Cheaper pricing than direct access
- Good API tool selection

Fal AI

- Wide variety of models available
- Solid alternative platform
- Reliable performance

Higgsfield

Best for Multiple models in one place

- Credit based system
- Creator plan offers excellent credit value
- Best starting point for AI advertising content

Personal Recommendation: AI Studio

For Nano Banana specifically, AI Studio is the preferred option because:

- **More granular control over outputs**
- **Better consistency within chat interactions**
- **Superior for specific use cases**

But this comes down to personal preference. Test multiple platforms to find what works best for your specific needs.

Platform Recommendations by Use Case

For AI Advertising Content:

Start with Higgsfield. It offers multiple sources in one place and provides the easiest entry point for anyone getting into AI generated advertising.

For Maximum Control:

Use AI Studio if you need precise control over every aspect of your generations.

For Cost Efficiency:

Try Kie AI for cheaper access to multiple models including Nano Banana Pro.

Bottom Line

Nano Banana Pro

gives you the ability to create consistent character based content and product imagery at scale.

Pick your platform based on whether you prioritize ease of use (Higgsfield), control (AI Studio), or cost (Kie AI).

Quick Reference Guide

Platform	Best For	Key Feature
Higgsfield	AI Advertising	Multiple models, credit system
AI Studio	Maximum Control	Granular control, consistency
Kie AI	Cost Efficiency	Cheaper pricing, multiple models
Fal AI	Variety	Wide model selection
Google Platforms	Official Access	Vids, Flow, Gemini integration
