CONTENTSYSTEM.AI

BONUS · TWO

# Tools & the *Stack*

The exact tools, video models, and platforms used to run everything in this course. Start here, stay simple, do not over-collect software.

imarketing.courses

BONUS · TWO

# Tools & the *Stack*

The exact tools used to run everything in this course. **Do not over-collect software.** This is all you actually need.

## Content generation

### *Higgsfield*

VIDEO GENERATION HUB

The platform you generate all your video content in. **Everything you need is inside Higgsfield**, including the two video models I personally use: **Kling 3** and **Seedance**. These two are the workhorses behind almost every AI clip in the modules.

Open Higgsfield →

## Store & sales

### *Shopify*

STORE PLATFORM

Where every store in this model lives. The Shrine theme (see Bonus 4) sits on top of Shopify. Start here when you hit the build trigger from Module 11.1.

Open Shopify →

### *ManyChat*

COMMENT-TO-DM AUTOMATION

The backbone of the comment-to-DM system from Module 10.5. When someone comments your keyword on a viral video, ManyChat automatically DMs them the link. Conversion tool and virality tool in one.

Open ManyChat →

## Infrastructure

imarketing.courses

NordVPN

US TARGETING

Premium plan, set to the United States. **Use a dedicated IP add-on**, not a shared one, because shared US IPs are flagged by the platforms. Pair this with the full setup protocol in Bonus 3 for the cleanest US identity.

Open NordVPN →

KEEP IT SIMPLE

That is the entire stack. **Higgsfield for content, Shopify for the store, ManyChat for automation, NordVPN for targeting.** Do not get distracted chasing the latest tool. The four above are all you need to run the system end to end.
