BONUS · FIVE

Email Stacks & Facebook *Setup*

When you scale across multiple accounts (Section 9), you need **lots of emails without hitting Gmail's limits**, and Facebook pages that the platform actually trusts. This module covers both: two methods for creating emails at volume, and the proper Facebook page setup.

Creating mass emails

METHOD ONE · THE EASIEST WAY

iCloud Plus · Hide My Email

This is the easiest and most reliable way to do it. iCloud Plus has a feature called **Hide My Email** that lets you generate unlimited email addresses that all link back to your main email. The best part: **you can still receive verification codes and recovery emails when you need them**.

1. Go to your iPhone **Settings**
2. Tap on your **Apple account** at the top
3. Go to **iCloud**
4. Scroll down to **iCloud Plus features**
5. Tap on **Hide My Email**
6. Create a new address
7. For the label, use your account username so everything stays organized
8. Copy the email and use it to create your account

That's it. Super simple, and you keep access to all your emails in one place.

METHOD TWO · THE FREE ALTERNATIVE

Outlook Emails

If you're limited by Gmail or don't have access to iCloud Plus, **Outlook is a solid alternative**. Create multiple Outlook emails for free at **outlook.com**. Microsoft is less restrictive than Gmail when it comes to creating multiple accounts.

This method takes more time than Hide My Email, but you keep full access to every inbox and can always receive verification codes.

Open Outlook →

Facebook account setup

The Facebook side has its own setup. The key is filling out everything so your "page health" reads as good, which is what the platform uses to decide whether to push your content.

THE SETUP STEPS

How to create your Facebook page

1. **Go to Pages.** From the menu button on your Facebook account, select **Pages**.
2. **Create new page.** Click on **Create new page**.
3. **Basic info.** Enter your page name, upload a **profile picture and background image**.
4. **Fill out every field.** You must complete all of them: bio, website, address. This is what maximizes your **page health bar**.
5. **Account type.** Choose the **Professional** account setting.

WALKTHROUGH VIDEO

Facebook account setup, full walkthrough.

A step-by-step video covering the entire Facebook page setup from scratch. **Watch this once before you start clicking around**, then follow it tap for tap with your Facebook open in another tab.

Watch on Google Drive →

The page health bar

Facebook shows a **page health bar** that tracks how complete your page is. The goal is simple: **get it to green before you post anything**. A page sitting at "Fair" with missing fields will get less reach than a fully filled-out page sitting at "Good." Fill out everything Facebook asks for, then start posting.

READY TO POST

Good (Green)

100%

STATUS: STRONG · READY

- ✓ **Name** filled in
- ✓ **Profile picture** uploaded
- ✓ **Banner image** uploaded
- ✓ **Bio** complete
- ✓ **Website** and **address** filled
- ✓ Account set to **Professional**

NOT READY YET

Fair (Amber)

~50%

STATUS: INCOMPLETE · HOLD POSTING

- × Name set, but...
- × Missing or incomplete **banner**
- × Missing or incomplete **bio**
- × Missing **address** or **website**
- × Profile not yet set to **Professional**

THE RULE

Make sure your page health is green before posting. Fill out everything Facebook tells you to fill out: name, banner, profile picture, bio, website, address, all of it. **Until the bar is green, do not start posting.** An unhealthy page caps your reach before you ever publish a video.
