MODULE 3.3

Editing & Repurposing *Content*

Taking proven content and rebuilding it into your own. Not stealing. Not reposting. Cutting it up and building something new out of the parts.

imarketing.courses

MODULE 3.3

Editing & *Repurposing* Content

The second method is taking content that already exists and turning it into your own. Most of the time this means a competitor's content. They have already made videos for a product, some of those videos have gone viral, and you are going to use that proven material instead of starting from a blank page.

WRONG

Downloading someone's video and reposting it as is.

That does not work, and it can get you flagged or get the original creator notified. Platforms can tell when you have simply taken someone's whole video. Sometimes they will even **tag or surface the original account to your viewers**. Reposting one for one is not the method.

RIGHT

Cut the content up and rebuild it.

You take a competitor's video, use only a short piece of it, then take another piece from another video, and you combine those short pieces into one new video that is yours. When you cut content into short segments and stitch several of them together, **the platform reads it as original content** rather than as stolen content.

This is the same reason stitch-style content works. You are not lifting a finished video. You are using raw pieces to build a new one.

The discipline that makes this work

3–5 s

The clip length rule

Use only about three to five seconds from any single video you pull from. If you lean on one source for too long, you start getting treated as if you stole the whole thing, which is when you get flagged or shadowbanned.

So you pull a few seconds from one video, a few seconds from another, and another, and you sync them together into one clean piece. Some platforms are stricter than others. On the stricter ones you stay tight to that three to five second range. On the looser ones you can get away with

imarketing.courses

slightly longer pieces. But the principle is the same everywhere: **short pieces, multiple sources, combined into something new.**

What makes this method actually print

Treat it like a real method, not a side activity

This is a real method that can make real money on its own, and people run it as a serious channel. If you treat it as something you do half-heartedly on the side, you get half-hearted results. Run it with the same intent you would run anything else.

Be different when you need to be

If you are the second person on a product, you can often closely follow what the top competitor is doing, use the short-clip approach, and do well. But if you are the third or fourth person, or you can tell everyone is about to pile onto the product, copying what everyone else is doing will not get you anywhere. That is when you bring something new: **a new angle, a new audience, a new content format that nobody has used with that product yet.** Because you are combining the short clips into original content and you are the first to try a new angle with it, you get the spread.

The AI overlay move (advanced)

There is one advanced repurposing move worth knowing, because it is **one of the strongest plays in the entire model right now**. You take a competitor's viral video, the whole thing, and you run AI transformation tools over it. **You change the character's appearance, you change the background, you change the aesthetic, while keeping the core structure of the original** (the hook, the pacing, the reveal beats) intact. Tools like **Higgsfield** are built for exactly this kind of transformation.

WHY IT WORKS

The result is your own original content that follows a proven structure. **You are not reposting the video, that does not work, the platforms catch it.** You are taking the skeleton of what already went viral and rebuilding the flesh of it with AI, so the output is technically new content. **To the algorithm, it reads as original. To the viewer, it reads as a fresh take. To you, it is faster than building from scratch**, and it is backed by a structure that already proved itself.

imarketing.courses

The old version of repurposing meant getting good views by being slightly different from the original. **The AI overlay version means you can be completely different on the surface while keeping every proven element of what worked underneath.**

"One of the cleanest ways to ride a viral concept without copying it directly."

This is advanced, so do not lean on it before you have basic content skills. **But once you do, it is a powerful tool in the kit**, and it is one of the moves the top operators are using right now.

WHY THIS METHOD EXISTS

There is an endless supply of content out there you can pull from. You do not have to invent everything. Take what already works, rebuild it into your own piece, and apply your own concepts on top of it. **Understanding why a video goes viral matters more than the raw footage**, because the concept is what carries it. The footage is just the raw material.
