MODULE 5.4

# The Value & Insecurity *Product Thesis*

Out of the three archetypes, there is one type of product that deserves its own focus, because it is **what AI specifically unlocked** and it is where a lot of the biggest results are coming from. Value products that solve a problem or insecurity and that can show a visual transformation.

## Why these convert so hard

A product that fixes a real frustration or a deep insecurity gives the buyer **a strong reason to buy**. And when you can show that fix happening visually, a clear before-and-after, the transformation itself becomes the wow factor. You do not need the product to be flashy. **The result is the spectacle.**

DAY 1

### *The problem*

The frustration, the insecurity, the thing the viewer wants to fix. Clearly shown so the viewer recognizes it instantly.

FEW STEPS LATER

### *The problem solved*

The result. The transformation. The reason the viewer pulls out their card. This visual journey is what makes people both watch and buy.

## Why AI unlocked this

Before, you could not easily show a before-and-after organically, so these products lived in paid ads. Now you can generate that transformation, which means **problem-solving products work in organic for the first time**, and they convert at very high rates when they go viral.

## A shift in how you think about targeting

You are not targeting a niche, a gender, or a race. You are targeting **a problem**. The problem is what cuts across all the different people who have it. If enough people have that problem, the problem itself becomes the audience.

*"Your product should solve a problem that shows up visually. Your content should show that problem being solved."*

imarketing.courses

You are speaking to anyone who has the problem, not to a demographic.

## How to find these products

Use the AI research method from Module 5.2. Ask an AI assistant for **a list of common insecurities or problems that can be solved with a single product and that visually represent the problem being fixed**. Steer it away from things that are hard to show on camera, and toward things with a clear before-and-after. Then take what it gives you, find the product on AliExpress or Alibaba, and you have a product that is built to convert with AI content.

THE UNDERLYING IDEA

The buyer is anyone whose problem is being solved on screen. Build the product around a problem with a visible fix, and **the demographic stops mattering**. The problem is the audience.
