MODULE 10.3

Domain, Linking, & the *Supplier Loop*

A few practical pieces complete the setup.

The domain.

Get a clean, simple domain for the store so it looks like a real brand rather than a random link. **This is a small cost and a big part of looking legitimate.** The attached video covers connecting it.

Linking to every platform.

Your store link goes in the bio of every account on every platform you post on, so no matter where a viewer sees your content, **the path to buy is one tap away**. Combined with the comment-to-DM automation from the "After You Go Viral" backend module, this makes sure the link is never more than a moment out of reach for anyone who wants to buy.

The supplier loop.

This is how fulfillment actually works, and it is simpler than beginners fear. You connect a supplier who can source the product so that when an order comes in on your store, **the supplier ships it directly to your customer**. You never touch the product or the package. The customer pays your store price, you pay the supplier their lower price, the difference is your profit. That gap between what the customer pays you and what you pay the supplier, paying the difference, is the margin the whole business runs on.

The suppliers I use

Rather than hunting around from scratch, start with these. The first is my main supplier. The rest are alternatives I have used or recommend.

imarketing.courses

MY MAIN SUPPLIER

Private Supplier

Best supplier so far. Low prices and reliable shipping times. The one I have personally used and continue to use for fulfillment.

WHATSAPP

+86 190 5058 9536

ALTERNATIVE · CAN SOURCE ALMOST ANYTHING

Wendy

Can pretty much source or create any product. Strong second option if my main supplier does not have what you need, or if you want to compare prices.

WHATSAPP

+852 9438 6236

More backup suppliers.

Four more numbers I have on hand. Same approach: WhatsApp them a photo of your product and ask if they have it.

- **+86 191 6370 5804**
- **+86 137 3205 7156**
- **+86 136 7095 0050**
- **+86 136 3413 7565**

imarketing.courses

HOW TO MESSAGE THEM

Use **WhatsApp**. Send them a picture of the product and ask if they have it. Keep it short. Ask the price and shipping. Ask how to connect them to your store for fulfillment. They will tell you how they want to be paid and how they connect.

One thing to know: these private suppliers are in China and they do not respond on weekends. They usually answer late at night your time, roughly **11pm to 7am for North America**. Do not take a slow reply as bad service. It is the timezone.

TIMING THE SUPPLIER

The supplier mirrors the store-build logic: **you do not need to lock one in before you have proven the product**, because your content never depended on having the product on hand in the first place. You sort the supplier out as the product proves itself and the store goes up, so fulfillment is ready when the orders are real.

A few things to watch out for

Most suppliers are fine, but a couple of traps are worth knowing about so you do not walk into them.

WATCH OUT

Be careful with MOQ deals as a beginner.

MOQ stands for **minimum order quantity**, and it means buying a bulk amount of product up front. Some suppliers will push this hard, especially once you start showing them sales. The offer often sounds like a better unit price, which it is, but the catch is **you are now sitting on inventory you have to move**. The whole reason this model works for beginners is that there is no inventory. If the product cools off, you are stuck with stock you cannot sell. As a beginner, ignore MOQ pitches and run the standard fulfillment loop. MOQ is a tool for operators who already have a product printing reliably and want to lower their per-unit cost. **It is not a beginner move.**

WATCH OUT

If a supplier feels pushy, walk.

If a supplier makes you uncomfortable or asks for things outside the normal flow, find another one. Suppliers are vendors. You are the customer paying them. **Treat the relationship that way.**

imarketing.courses

"Build the store when the product earns it. Connect a clean domain. Link it everywhere. Run the supplier loop. Collect the difference."

For the hands-on build, watch the attached video and use the Shrine theme it walks you through.
