MODULE 12.1

Why One Account Is *Not Enough*

A single account, even a great one, has a ceiling and a lifespan. Any one winning format eventually fades, and any one account can go quiet on you for stretches you cannot control. **If your entire business is one account running one format, the day that account cools off is the day your income stops.** That is a fragile way to operate, and it is the main reason people who go viral once cannot repeat it.

The fix

Stop treating a winning product as one account's job and **start treating it as something you run across many accounts at once**. When a product is working, you do not run it on a single account, you run it on several at the same time. This multiplies your reach immediately, and it protects you, because when one account has a slow week another is usually carrying. **You are no longer praying that one account stays hot. You have spread the bet.**

THE MYTH WORTH KILLING HERE

You will hear that running multiple accounts on the same product gets one of them shadowbanned or throttled. **It does not.** Operators routinely run several accounts on a single winning product across platforms and make far more for it. When something is working, do not get protective and cautious with it on one account. **Clone the approach across many.**
