MODULE 13.2

Master the Skill, *Not the Money*

The single biggest mindset mistake is chasing the money directly. People fixate on hitting a number next month, and that fixation actually slows them down, because they are focused on the outcome instead of the skills that produce it. **The fix is to flip it. Stop chasing the money and obsess over the skill, and the money follows.**

The order the skills come in

Knowing the order keeps you sane during the stretch where results feel lopsided.

FIRST

Master going viral.

Run lots of products. Pour your focus into the content skill. **A lot of your products will go viral but not convert during this phase, and that is fine.** You are building the virality skill, not banking yet.

SECOND

Pick products that convert.

Once you can reliably get attention, turn to the second skill: **choosing products that actually convert** once the views show up.

COMBINED

Consistent big months.

When both are in place, they combine. **The breakout is not luck landing on you, it is the two skills finally clicking together.**

"You are not trying to get lucky once. You are building a skill you can repeat on purpose."

This is exactly why some people hit one big month and then disappear, the one-hit wonder. They got a single product right without understanding why, so they could not do it again. **That is the entire difference between a fluke and a business.**
