Writing the Script

Once you've selected your video topic, it's time to write the script.

And just like with Video Topic selection - the smartest way to do it is:

Research + AI.

You are not writing from scratch.

You are reverse-engineering what already works.

Step 1: Find Viral Scripts

BONUS: Now you can track Skeleton YouTube and TikTok Videos with my tool created exclusively for my course students. Check section 4.3 NEW BONUS: Custom Research Tool

Go back into research mode.

This time, you're not looking for trending topics from the past week.

You're looking for strong-performing scripts in your specific sub-niche.

That's a key difference.

If your topic is:

- Ancient Greece → find viral videos from that sub-niche
- "Would you get rich selling…" → find viral videos from that format
- Medieval POV → find medieval viral scripts

They don't have to be recent.

You're analyzing:

- pacing
- tone
- structure
- escalation
- emotional progression

Find 5–10 videos with:

- 1–2+ million views

These will be your structural references.

Step 2: Extract the Scripts

Now you need the actual text.

TikTok

Use:
👉 https://tokscript.com/

Paste the TikTok link and extract the script.

YouTube Shorts

1. Copy the Shorts link.
   Example:
   https://www.youtube.com/shorts/n2Jdrc3_8MQ
2. Replace **“shorts”** with **“video”**
   Like this:
   https://www.youtube.com/video/n2Jdrc3_8MQ
3. Open the new link.
4. Expand the description.
5. Click **Transcript → Show Transcript**
6. Copy the full script.

Now you should have 5–10 strong scripts.

Step 3: Use Claude to Generate Your Script

Personally, I use **Claude** for script writing. In my opinion, it’s currently the strongest AI for pacing and natural storytelling.

If you don’t have access, you can use ChatGPT or Gemini - but Claude is my recommendation.

Now paste your 5–10 scripts into Claude.

Then use this refined prompt:

Claude Prompt (Script Generation)

“I’m sending you multiple viral short-form scripts from my niche.
Based on their structure, pacing, tone, humor style, simplicity of language, historical references, escalation pattern and emotional progression, write a new script for my video about:

[INSERT YOUR CHOSEN TOPIC HERE]

Requirements:

- Match the pacing and rhythm of the examples.
- Keep the language simple and direct.
- Maintain emotional progression and escalation.
- Use a strong hook at the beginning.
- Include clear time progression markers (days, hours, years, quantities, etc.).
- Keep a similar overall structure and arc (often ending negatively or with a twist).
- Target approximately the same character length as the scripts provided (around 1000–1300 characters).

Make it feel natural, engaging and optimized for short-form retention.”

Claude will generate your script.

Now you review it.

Step 4: Refinement

You read the script carefully.

Ask yourself:

- Does it feel smooth?
- Is the pacing tight?
- Does it drag anywhere?
- Is anything hard to visualize?

If you don’t like it:
Tell Claude exactly what’s wrong.

Claude often writes too long - even when you specify length.

If that happens:
Ask it to shorten the script by 30–50%.

Then manually refine it.

Important:

You will usually need to remove around 20% of sentences yourself.

Cut:

- lines that are hard to visualize
- lines that repeat information
- lines that add nothing to escalation

Polish it.

Ideal Length

For monetization on YouTube and TikTok, your video should typically be around 1 minute.

That usually equals:

~1000–1300 characters.

Final Script Checklist

Before moving on, confirm your script includes:

1️⃣ Emotional Progression + Time Structure

Most scripts include structured progression:

- Day 1 / Day 2 / Day 3
- Hour 1 / Hour 12 / Hour 48
- Year 1 / Year 5
- Quantities (“How many X does it take…”)

Without progression markers, it’s very hard to sustain a full 1-minute narrative.

Time progression creates:

- pacing
- structure
- anticipation

If you fed Claude good reference scripts, it will usually include this automatically.

2️⃣ Strong Ending

The ending cannot be flat.

In most cases:

- It ends negatively
- Or with a twist
- Or with a strong final line

Why?

Because strong endings:

- Increase average view duration
- Increase replays
- Increase comments

A boring ending kills momentum.

Make sure the conclusion feels intentional and impactful.

Once your script feels tight, structured and emotionally complete you move to the next step:

Turning Script Into Prompts.

And that’s where your words become visuals.
