EXCLUSIVE RESEARCH TOOL ONLY FOR MY COURSE STUDENTS:

skeleto-niche-leaderboard.vercel.app

FOR YOUTUBE & TIKTOK (TIKTOK SECTION CURRENTLY IN MAINTENANCE MODE, I'M WORKING ON IT)

How to Use the Tool?

This tool is designed to help you **quickly find the best video topics** by analyzing what is currently performing across selected channels.

Instead of manually checking dozens of channels, the tool gathers everything in one place and lets you **sort and analyze the most important data instantly**.

Sorting Options

You can sort videos using three different metrics:

Views
Shows the videos with the highest total views. This helps identify topics that already proved to perform well.

Views per Hour (VPH)
This is the most powerful metric for trend discovery.
It shows how fast a video is gaining views right now, which helps you spot **topics that are currently exploding**.

Newest
Displays the most recently uploaded videos first.
This helps you monitor what creators are posting right now.

Channel Selection

The channels included in the tool are **manually curated**.

I personally add them to make sure the data stays **relevant and high quality**.

New channels will be **added regularly**, so the dataset will continue growing over time.

It will be **updated by me continuously**.

Why This Tool Is Powerful for Creators

Finding a good topic is often **the most important step** in making a successful video.

This tool makes that process dramatically easier.

It helps you:

• identify trending topics quickly
• see what is gaining traction right now
• understand what viewers are currently interested in
• get inspiration for your own videos
• research ideas for scripts and storytelling

Because the data is **updated in real time**, you can react quickly and create content based on **what is actually working right now**.

Perfect for

• video topic research
• script writing inspiration
• spotting trends early
• studying successful channels
• understanding audience demand

Instead of guessing what might work, you can base your decisions on **real performance data**.
