Visual Engagement Hacks

Just like any niche, this niche evolves.
What worked a few months ago may stop working tomorrow. That's why your content also needs to evolve if you want to keep generating views.

In section **4.4** we already talked about **script-based engagement** - things like Socrates-style dialogues and other storytelling hooks that increase retention.

This section focuses on something different:

visual elements that increase engagement - likes, comments and shares.

Small visual details can dramatically increase how much people interact with your videos.

Here are a few techniques that work extremely well.

---

1. Giving the Skeleton Unique Clothing & Accessories

One of the easiest ways to increase engagement is by giving your skeleton **interesting clothing or accessories**.

A great example of this is the channel:
https://www.youtube.com/@DD_Informer

This creator not only dresses the skeleton according to the story context, but also adds **unexpected visual details** that viewers notice and comment on.

Examples include things like:

- shark Crocs
- Hello Kitty Crocs
- unusual accessories
- meme references

These kinds of details trigger comments because viewers notice them and start discussing them.

You can easily generate clothing ideas directly when creating prompts.
ChatGPT is actually very good at suggesting **outfits that match the script context**.

But the real engagement often comes from **adding something slightly unexpected**.

Another example from the same channel is a **name badge saying "Evan Burger".**

This is a recent meme reference and generates a huge amount of comments because viewers recognize it and point it out.

---

2. Adding Recognizable Characters

Another technique that often increases engagement is **briefly including recognizable characters**.

This doesn't mean turning the video into a crossover - usually **1–2 scenes are enough**.

People love noticing familiar characters unexpectedly appearing in content.

When viewers recognize something they know, they often comment about it immediately.

Even small appearances can trigger a lot of interaction.

---

3. Using Easter Eggs

Easter eggs can be extremely powerful for engagement.

However, you should **use them carefully**.

If overused, they can look like an AI mistake and slightly damage retention.

Because of this, I recommend using them:

- near the **end of the video** or
- **once or twice per video maximum**

One example I personally used generated **around 80% of all comments on that video**.

In a video about **Ancient Egypt**, I added a **small BMW logo next to the Pharaoh**.

Viewers immediately noticed it and started commenting about it.

That single small visual detail triggered a huge number of comments.

How to Find New Ideas

The best way to find visual engagement ideas is simple:

Study the comments under viral videos.

Comments often reveal exactly what viewers noticed and what made them engage.

For example, under **DD Informer's videos**, you'll often see many comments mentioning the **"Evan Burgers" badge**.

That tells you immediately that this element is working.

You can then test similar ideas in your own videos.

The rule is simple:

If viewers notice it and comment about it, it's working.

Your job is to find those elements and integrate them naturally into your visuals.

Important Reminder

Visual engagement tricks should **support the video**, not overwhelm it.

Use them strategically.

A few well-placed details are often far more powerful than filling every scene with visual noise.
