Editing System

At this stage, you already have:

- Your final script
- Generated images
- Animated scenes

Now we edit everything.

When it comes to editing software, the truth is simple:

You can use anything.

The most important part - the hard part - is already done.

The animations carry the quality.

What I Personally Use

I use **Premiere Pro** simply because I'm used to it.

However, and this is important, you absolutely do NOT need Premiere.

For this niche, **CapCut** is more than enough.

In fact, CapCut is:

- simpler
- faster
- beginner-friendly
- and just as effective for this format

This blueprint is about the system, not the software.

Use what feels fine for you.

What This Section Covers

In this chapter, I'll show you:

- How I structure my timeline
- How I generate voiceover

- How I match animations to narration
- How I control pacing
- What export settings I use

Editing in this niche isn’t complicated.

It’s about:

- rhythm
- clarity
- and clean structure

We’ll break it down step by step.
