Voiceover Generation (ElevenLabs)

For voiceovers, I use **ElevenLabs**.

It's currently one of the most natural-sounding AI voice generators available and works perfectly for this niche.

Elevenlabs offers **10,000 free credits per month** on the free plan.

If you run out of credits, you can either:

- upgrade your plan
- or create a new account with a different email

The Voice I Use

The main voice I personally use is:

Alex
Voice link:
https://elevenlabs.io/app/voice-lab/share/a231663267efedf44629d1210c43f7045270e9dc6cf04a23c533dd75a567d5ba/yl2ZDV1MzN4HbQJbMihG

Another very popular voice in this niche is:

Liam – Energetic, Social Media Creator
Voice ID: TX3LPaxmHKxFdv7VOQHJ

It's widely used and performs well.

But here's something important:

You do not need to use those exact voices to go viral.

Elevenlabs has many good voices.

In fact, choosing a less common voice can help you:

- stand out
- build recognizable branding
- differentiate your channel

How to Generate the Voiceover

The process is simple:

1. Paste your script into ElevenLabs.
2. Select your voice.
3. Click **Generate**.

However - here's a key tip:

Do not generate the entire script at once.

Instead, split your script into 6–7 smaller sections.

Why?

Because:

- The pacing sounds more natural
- The emotion is more controlled
- You reduce awkward pauses
- The AI is less likely to distort rhythm

Smaller chunks = cleaner result.

After Generation

Once your audio is generated:

- Download each section.
- Keep them organized.

You'll assemble them inside your editing software in the next step
