Export Settings for Shorts

Before exporting, watch the entire video one more time.

Check:

- Is the voiceover clear?
- Is music lower than narration?
- Are there any visual glitches?

Export Settings

Exporting is simple.

Use:

- **Resolution:** 1080p (1080x1920 vertical)
- **Frame rate:** 60 fps

That’s it.

In CapCut

- Set resolution to 1080p
- Set frame rate to 60 fps
- Increase bitrate (set it to higher transmission speed / higher quality)

Higher bitrate preserves detail in fast-moving scenes.

Once exported:

Your video is ready to publish.
