This Works Beyond the Skeleton Niche

The Skeleton niche is currently one of the most viral AI formats.

That’s probably why you bought this blueprint - to learn exactly how to generate these types of videos.

But here’s something important:

This system is not limited to Skeleton.

It works for any AI niche that is trending right now.

Why?

Because the core structure remains the same:

- Research
- Script writing
- Prompt engineering
- Image references
- Image generation
- Animation
- Editing
- Posting

Every single step in this blueprint can be transferred to a different format.

The character may change.

The theme may change.

The aesthetic may change.

But the system does not.

Prompting works the same.
Image references work the same.
Generation tools work the same.
Animation workflow works the same.

In the next subchapter, I’ll include examples of other AI niches that are currently trending and can be replicated using this exact method.

Once you understand the system, switching formats becomes easy.

And that’s where real scalability begins.
