Facebook Setup

Facebook is often ignored. That’s a mistake.

If you’re already producing AI content, reposting to Facebook is almost zero extra effort, but it can become an additional revenue stream once your pages qualify for monetization.

Creating a Facebook Page

You have a few options.

Option 1: Create a New Page (Desktop)

1. Log into Facebook.
2. Click **Pages** in the left menu.
3. Click **Create Page**.
4. Select **Public Page**.
5. Enter your Page name and choose a category.
6. Click **Create Page**.
7. Add a profile picture and cover photo.
8. Set up your action button (Contact, Learn More, etc.).

You can skip:

- Location
- Business hours
- Detailed contact information

None of that matters at the beginning.

Keep it simple.

Option 2: Create a New Page (Mobile)

1. Open the Facebook app.
2. Tap **Menu** → **Pages** → **Create**.
3. Select **Professional**.

4. Tap **Create a New Page**.
5. Enter name and category.
6. Select **Public Page**.
7. Add profile and cover photo.

Done.

Option 3: Use Professional Mode on Your Personal Profile

If you don't want to manage a separate Page, you can enable **Professional Mode**:

1. Go to your profile.
2. Click the three dots next to "Edit Profile."
3. Select **Turn on Professional Mode**.
4. Follow setup instructions.

This is faster.

But it gives you fewer long-term tools compared to a full Page.

If you're building seriously, I recommend a separate Page.

Instagram (Optional but Recommended)

If you're setting up Facebook properly, it makes sense to also create an Instagram account.

You can do this directly from the Instagram app:

1. Download Instagram.
2. Tap **Create New Account**.
3. Use email (recommended).
4. Verify the code.
5. Create password.
6. Choose username.

After creation, switch to a **Professional Account** in settings.

Even if Instagram isn't your main focus right now, it's smart to secure the brand name early.

Connecting Instagram to Facebook

If you already have a Facebook Page:

1. Go to 👉 https://business.facebook.com/
2. Log in.
3. Open Business Settings.
4. Click **Connect Instagram**.
5. Log into Instagram and confirm connection.

This allows you to:

- Cross-post content
- Access analytics

Even if you don't use all of it immediately, having everything connected makes scaling easier.

Why Facebook Is Worth It

Facebook monetization works differently than YouTube or TikTok, but it can be surprisingly strong for short-form content.

And here's the important part:

Reuploading costs you almost nothing.

You're not creating extra content.

More platforms = more shots at monetization.

We'll cover Facebook monetization requirements in detail in the monetization section later.

For now, focus on:

- Clean page setup
- Connecting your ecosystem
